What Tableau Server Can Do For Your Court

## Data discovery, analysis and collaboration.

Do you want a way to access and share data with court personnel right in a browser? Do you want to have access to analyze and research CourTools Perfomance Measures? Do you want to collaborate with the Office of Research and Justice Statistics (ORJS) on Data Quality issues? You can do it with a license to Tableau Server.

Interactive Dashboards on the web.

Dashboards created by the ORJS are available to you anytime, anywhere. Highlight and drill down to analyze and find answers to your data questions right in a browser. Dashboards are refreshed daily to contain the most up-to-date information. Dashboards currently on Tableau Server include:

- Summary Report
- Manner of Filing
- Manner of Disposition
- Age of Active Pending (with case detail)
- Clearance Rate
- Time to Disposition

And more to come!

Invite the facts to your meetings.

Do you need to explain data to your Judge, but paper reports don't allow you the flexibility to answer specific questions on the fly? Why not interact with data live during your meeting? With Tableau Server you can filter, sort, and discuss data in real time. Ask and answer questions in the moment, face-to-face.

For more information.
